There are many different types of medicines to treat HIV (Human Immunodeficiency Virus). These medicines are either taken in combinations, often called “regimens” or “cocktails,” or are co-formulated single-tablet regimens.

- It is important that you take your medicine exactly as prescribed by your healthcare professional.
- Tell your healthcare professional if you have any side effects.
- Do not stop taking any medicine you have been prescribed without first talking to your healthcare professional.
- Discuss any questions you may have about your medicines with your healthcare professional.

**In Infection and Prevention: Medicines to Treat HIV**

- **Entry Inhibitors:**
  - Frenepavir (FPRV), cobicistat (CBO)
  - Darunavir (DRV), cobicistat (CBO)
  - Atazanavir (ATV), cobicistat (CBO)
  - Tipranavir (TPV), ritonavir (RTV)

- **Non-Nucleoside Reverse Transcription Inhibitors (NNRTIs):**
  - Efavirenz (EFV)
  - Nevirapine (NVP)
  - Raltegravir (RAL)
  - Darunavir (DRV)

- **Nucleoside / Nucleotide Reverse Transcriptase Inhibitors (NRTIs/Nukes):**
  - Lamivudine (ABC/ZDV/3TC)
  - Emtricitabine (FTC)
  - Tenofovir (TDF)
  - Zidovudine (ZDV)

- **Pharmaceutical Enhancers:**
  - Tybost (RBV)

**HIV Medicine Options**

- **PROTHERIX (PI):**
  - Prezista (DRV/ATV/3TC)†
  - Kaletra (ATV/RR)

- **NON-NUCLEOSIDE REVERSE TRANSCRIPTASE INHIBITORS (NNRTIs/Non-nukes):**
  - Efavirenz (EFV)
  - Nevirapine (NVP)
  - Raltegravir (RAL)

- **NUCLEOSIDE /NUCLEOTIDE REVERSE TRANSCRIPTASE INHIBITORS (NRTIS /Nukes):**
  - Lamivudine (ABC/ZDV/3TC)‡
  - Emtricitabine (FTC)
  - Tenofovir (TDF)
  - Zidovudine (ZDV)

**Notes**

- Please see reverse side for Indication and Important Safety Information for EDURANT, INTELENCE, PREZISTA, and PREZISTA.
- For additional information, please visit care4today.com/mhm/ or download the Care4Today app.
You may also report side effects to Janssen Products, LP, at 1-800-JANSSEN (1-800-526-7736).
